

# Whole-Structure Fumigation vs. Spot Treatments

## Whole-structure Fumigation is the Right Choice, Here's why:

Homeowners rely on the professional expertise of pest management professionals to help protect their largest single investment, their home. That's why you can be confident when Master Fume™ gas fumigant is recommended. Master Fume disperses throughout the entire structure, even into areas that are inaccessible, eliminating the hiding places of drywood termites. Master Fume penetrates wood to destroy all termite colonies that are present.

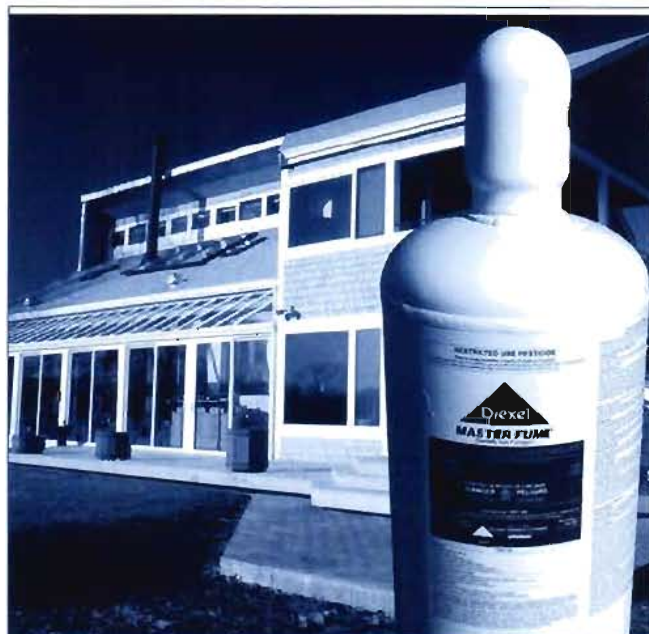

### Advantages of Whole-structure Fumigation:

- 100% Elimination of Drywood Termites
- Administered by Trained, Knowledgeable Fumigation Experts
- Backed by Unparalleled Service and Support

## Whole-structure Fumigation Outperforms Spot Treatments

Whole-structure fumigation with Master Fume gas fumigant eliminates 100% of drywood termites. For a spot treatment to be effective, you would have to apply the treatment to every termite colony present. One of the disadvantages of spot treatments is the inability to eliminate unidentified termite colonies. Master Fume disperses throughout the entire structure, reaching hidden termite colonies.

You can be confident in safely returning to your home once the fumigation and aeration process is complete. When the fumigation tarp is removed, Master Fume gas fumigant dissipates from the home without leaving any surface residue behind. Master Fume is administered by highly trained fumigation experts who are knowledgeable in the most advanced fumigation techniques.

When Master Fume gas fumigant is used proven effectiveness is assured.

### Disadvantages of Spot Treatments

- Spot treatments do not eliminate unidentified termite colonies
- Drywood termites that survive spot treatments can re-establish a new colony
- Homeowners may have to pay for multiple spot treatments over time to control drywood termites
- Some treatments require drilling which can potentially cause additional damage to a home

Master Fume is a trademark of Drexel Chemical Company. Master Fume is a federally Restricted Use Pesticide. Always read and follow label instructions carefully.
